

Unity Development Knowledge Base

HybridCLR

HybridCLR is a Unity hot-update solution that supports AOT platforms. It allows developers to update game logic without republishing the entire application.

Addressables

Addressables is Unity's resource management system. It provides asynchronous loading, dependency management, and remote content updates.

Object Pool

An object pool reduces runtime instantiation and destruction costs by reusing objects. It is commonly used for bullets, effects, and frequently created game objects.

Digital Twin

A digital twin system synchronizes real-world equipment data with a virtual scene. Data is often collected from PLCs, sensors, and industrial devices through WebSocket or MQTT.
